The US\$ 50M Pokuase BSP, on completion, the quality and reliability of power supply in Pokuase, Kwabenya, Legon, Nsawam and the outlying communities, will improve significantly. The Project will also lead to a significant reduction in technical losses in the GRIDCo transmission system and in ECG's power distribution networks, thereby improving the financial viability of the utilities.

Switch Yard with installed Transformers

ECG & GRIDCo Control Buildings

Installed Switchgears
